Summary

Full-stack engineer who cares more about how software feels to use than how cleverly it was built. I want the apps I ship to feel inspiring, not just functional, and my proudest work is always the feature a user noticed, used, and came back to. Underneath, my approach pairs strong engineering fundamentals and best practices with AI as a development partner, producing technically sound code and infrastructure at high velocity. Currently building AI-powered products at Repify Ai with that bar in mind. Outside of Repify Ai, I lead engineering on Admin App, a roster-aware social publishing tool for athletic departments built on a two-person team with Addison driving product and design.

Technical Skills

Frontend: Next.js, React.js, TypeScript, Tailwind, Vue.js, Filament, WordPress, Twig, HTML, CSS

Backend: Python, Django, MongoDB, PostgreSQL, Prisma, Laravel, PHP, JavaScript, CraftCMS, MySQL, Eloquent

Cloud & Infrastructure: AWS (incl. Cognito), Infrastructure as Code (IaC), Terraform, Docker, Kubernetes, Stripe

AI: Anthropic (Claude), OpenAI, Gemini, Agentic Systems, Prompt Engineering

Tools & Domains: Git, OAuth, Multi-tenant Architecture (RBAC), Promise Handling, GuzzleHttp, AJAX, JSON, SaaS, Yardi/RentCafe, Entrata, RealPage, Fortress

Experience

Repify Ai · Full Stack Software Engineer · Remote · *07/2025 to Present*

- Build AI-powered compensation software for the beverage industry on a Python, Django + MongoDB, and React stack (Docker + Kubernetes, deployed to AWS via infrastructure-as-code), shipping full-stack features end-to-end.
- Designed and built the company's entire Stripe payments architecture from scratch (products, pricing, subscriptions, webhooks, customer lifecycle, reconciliation), establishing the billing foundation for an early-stage startup with no prior payments infrastructure.
- Shipped **GetGuten** end-to-end (inception, build, deploy): a Claude-powered AI content tool that started as an internal Repify Ai project and gained shareholder interest as a standalone product.
- Integrate intelligent agent frameworks into product features to automate complex domain decisions; collaborate cross-functionally with design and product in Agile.

Resi · Full Stack Software Engineer · Remote · *03/2023 to 07/2025*

- Developed and maintained scalable web applications, integrating backend (PHP, Laravel, Eloquent) with frontend (Vue.js, Twig, Filament).
- Built and managed robust API integrations with major Property Management Systems (Yardi, Entrata, RealPage, Fortress), enabling automated data sync and extended functionality.
- Architected and optimized database structures for query efficiency and data integrity at scale; designed custom solutions in WordPress, Laravel, and CraftCMS.

Fullstack Academy · Software Engineering Instructor · Remote · *12/2022 to 03/2023*

- Instructed full-time PERN bootcamp (PostgreSQL, Express, React, Node.js); led capstone e-commerce build, ran mock technical interviews, mentored on debugging and best practices.

Education

University of Oklahoma · Bachelor of Business Administration · 3.4 GPA · *Graduated 05/2017*

Fullstack Academy · Software Engineering Certificate · *Graduated 08/2022*
